## TGM4

## series

## - Ergo Motion - Industrial Motion

The TGM4 series is TiMOTION's compact size gear motor. It was designed primarily for ergonomic applications like height adjustable workstations and tables, but can be used in many other applications. This economical product allows for fast, smooth and quiet adjustment of built-in spindles through the use of external limit switches. Shafting allows for the mechanical synchronization of dual spindles.

## General Features

Voltage of motor
Maximum speed at full load
Maximum rated torque
Operational temperature range
at full performance
Options
Hexagon hole for the shaft by 6 mm diameter
Low noise

## Note

1 Please refer to the approved drawing for the final authentic value.
2 The current \& speed in table and diagram are tested with TiMOTION control boxes, and there will be around $10 \%$ tolerance depending on different models of the control box. (Under no load condition, the voltage is around 32 V DC. At rated load, the voltage output will be around 24 V DC)

## Note

1 The combinations of TGM and TBS are marked as "v" on the above table.
2 When choosing the combination of TBS2 / 3 and TGM7, the hexagonal drive shaft is not required.
3 When choosing the combination of TBS1 / 4/5/9/10 and TGM1 / 3 / 4, the extra order of hexagonal drive shaft is needed.
4 Please refer to the table below for the serial numbers and the dimensions of the component.
